KERATINOCYTES (1) CELL ADHESION D INTEGRIN ALPHA-ION VIA TYROSINE

COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH EN THE ALPHA-3 CHAIN IS A SUBURIT OF LAMININ-5 (EPILIGRIN/KALININ/NICEIN), AND POSSIBLY ALSO A COMPONENT OF LAMININ-6 (K-LAMININ) AND LAMININ-7 (KS-LAMININ). COMPONENT OF LAMININ-7 (KS-LAMININ) IN THE BASEMENT SUBCELLULAR LOCATION: EXTRACELLULAR; FOUND IN THE BASEMENT MEMBRANES (MAJOR COMPONENT). SUBUNIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTIN DIFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, GAMMA), WITO EACH OTHER BY DISULFIDE BONDS INTO A CROSS-SHAPED CONSISTING OF THREE SAMMA), WHICH ARE BO END

:

-THE SEQUENCE SHOWN HERE TWO ISOFORMS A AND B DI DIFFER IN THEIR N-HE SMALLER VARIANT

EPITHELIA AND IN OTHER SPECIALIZED TISSUES WITH PROMINENT SECRETORY OR PROTECTIVE FUNCTIONS. EPITHELIAL BASEMENT MED AND EPITHELIAL CELL TONGUE THAT MIGRATES INTO A WOUND BED DIFFERENTIAL AND FOCAL EXPRESSION OF THE ALPHA-3 CHAIN IS TISSUE SPECIFICITY: SKIN; RESPIRATORY, URINARY, AND DIGESTIVE MEMBRANE OBSERVED

-

INDICTION: LAMININ-5 IS UP-REGULATED IN WOUND SITES OF HUMAN SKIN. DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COILED COIL STRUCTURE.

DOMAIN: DOMAIN G IS GLOBULAR.

DISEASE: DEFECTS IN LAMA3 ARE A CAUSE OF JUNCTIONAL EPIDERMOLYSIS BULLOSA (JEB) GRAVIS, ALSO KNOWN AS HEBLITZ TYPE JEB. IT IS A BLISTERING DISORDER IN SKIN THAT IS CHARACTERIZED BY A SEPARATION OF BASAL CELLS FROM THE BASEMENT MEMBRANE DUE TO A DECREASED NUMBER OF HEMIDESMOSOMES. LAMININ-5 IS MISSING FROM THE BASEMENT MEMBRANE OF PATIENTS WITH THE GRAVIS FORM ę EPIDERMOLYSIS

SIMILARITY: SIMILARITY: CONTAINS 2.5 LAMININ EGF-LIKE DOMAINS.
5 LAMININ G-LIKE DOMAINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Compositions of OspC |

Compositions of OspC polypeptides Lyme disease are used to immunize to Lyme disease -
                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides compositions comprising ospC proteins an chimeric ospC proteins from members the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads

В
               The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads to Lyme disease.
                                                                                                                                                                                                                                                                        Chimeric -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B
 Sequence
                  to Lyme
                           The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads
                                                                                                   6
                                                                                                        Compositions of OspC polypeptides from strains of Borrelia which cause Lyme disease are used to immunize animals and detect immune responses
                                                                                                                                                                                                                                                                                                    Chimeric -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                       The present invention provides compositions comprising ospC proteins chimeric ospC proteins from members of the Borrelia genus. These may Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leaves the state of the spread by ticks and leaves the spread by tic
                                                                                                                                                                                                                                                                                                                Compositions of OspC plyme disease are used to Lyme disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides compositions comprising ospC proteins chimeric ospC proteins from members of the Borrelia genus. These may Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and learners.

These may Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leave the provided by the same of the spread by ticks and leave the same provided by the same

.
    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                673
